Welcome to OpenJDK 8 Updates!

OpenJDK 8 updates are a separate project of OpenJDK. Andrew Haley serves as the Project Lead. The list of Reviewers, Committers, and Authors can be found in the jdk8u entry of the OpenJDK Census.

Maintainers

- Andrew Haley
- Andrew Hughes
- Severin Gehwolf

Releases

**Latest GA release:** 8u372

Latest Generally Available (GA) binary releases of the OpenJDK jdk8u project are available at: [https://adoptium.net/temurin/releases/?version=8](https://adoptium.net/temurin/releases/?version=8)

Latest Early Access (EA) binary releases of the OpenJDK jdk8u project are available at: [https://adoptium.net/temurin/nightly/?version=8](https://adoptium.net/temurin/nightly/?version=8)

Most recent and past release details:

- 8u372-b07 (GA), April 18th 2023 [Release] [Tag] [Binaries]
- 8u362-b09 (GA), January 17th 2023 [Release] [Tag] [Binaries]
- 8u352-b08 (GA), October 18th 2022 [Release] [Tag] [Binaries]
- 8u345-b01 (GA), August 2nd 2022 [Release] [Tag] [Binaries]
- 8u342-b07 (GA), July 19th 2022 [Release] [Tag] [Binaries]
- 8u332-b09 (GA), April 22th 2022 [Release] [Tag] [Binaries]
- 8u322-b06 (GA), January 30th 2022 [Release] [Tag] [Binaries]
- 8u312-b07 (GA), October 19th 2021 [Release] [Tag] [Binaries]
- 8u302-b08 (GA), July 20th 2021 [Release] [Tag] [Binaries]
- 8u292-b10 (GA), April 20th 2021 [Release] [Tag] [Binaries]
- 8u282-b08 (GA), January 19th 2021 [Release] [Tag] [Binaries]
- 8u275-b01 (GA), November 5th 2020 [Release] [Tag] [Binaries]
- 8u272-b10 (GA), October 20th 2020 [Release] [Tag] [Binaries]
- 8u265-b01 (GA), July 27th 2020 [Release] [Tag] [Binaries]
- 8u262-b10 (GA), July 14th 2020 [Release] [Tag] [Binaries] [Missing changes vs 8u262 of Oracle] (JBS Login required) [Additional changes vs 8u262 of Oracle]
- 8u252-b09 (GA), April 14th 2020 [Release] [Tag] [Binaries] [Missing changes vs 8u252 of Oracle] (JBS Login required) [Additional changes vs 8u252 of Oracle]
- 8u242-b08 (GA), January 19th 2020 [Release] [Tag] [Binaries] [Missing changes vs 8u242 of Oracle] (JBS Login required) [Additional changes vs 8u242 of Oracle]
- 8u232-b09 (GA), October 15th 2019 [Release] [Tag] [Binaries] [Missing changes vs 8u232 of Oracle] (JBS Login required) [Additional changes vs 8u232 of Oracle]
- 8u222-b09 (GA), July 16th 2019 [Release] [Tag] [Binaries] [Missing changes vs 8u222 of Oracle] (JBS Login required) [Additional changes vs 8u222 of Oracle]
- 8u212-b03 (GA), April 16th 2019 [Release] [Tag] [Binaries] [Missing changes vs 8u212 of Oracle] (JBS Login required) [Additional changes vs 8u212 of Oracle]

Repository Status

- jdk8u-dev (git): Closed for rampdown. Once it re-opens, pushes for OpenJDK 8u392 after jdk8u-fix-yes approval. Check here for clearance.
- jdk8u (git): Critical (regression or urgent) fixes for OpenJDK 8u382 after jdk8u-critical-yes approval. Check here for clearance.

Timelines

Dates may be subject to change

OpenJDK 8u382

- Monday, February 27th 2023: jdk8u-dev forest open (tag: jdk8u382-b00)
- Friday, April 28th 2023: First build promotion jdk8u-devjdk8u (tag: jdk8u382-b01)
- Friday, May 5th 2023: Skipped; no changes
- Friday, May 12th 2023: Second build promotion jdk8u-dev jdk8u (tag: jdk8u382-b02)
- Friday, May 19th 2023: Skipped; no changes
- Friday, May 26th 2023: Third build promotion jdk8u-dev jdk8u (tag: jdk8u382-b03) & start of Rampdown phase
- Friday, June 2nd 2023: Skipped; no changes
- Friday, June 9th 2023: Skipped; no changes
- Friday, June 16th 2023: Skipped; no changes
- Friday, June 23rd 2023: Final jdk8u build promotion (tag: jdk8u382-b04)
The suggested process is as follows:

1. Check the bug database for which JDK versions already have the patch applied.
2. When actively starting working on the bug, add a label of the form `jdk8u-<username>`, to the bug - where `<username>` is your OpenJDK username - to indicate that you are creating a backport.
3. Take a copy of the patch from the repository of the JDK version closest to 8u to minimise changes.
4. 8u is now a single repository, so there should be a 1:1 relationship between patches to later JDKs and 8u patches, rather than multiple patches for individual sub-repositories. However, file locations are highly likely to be different on 8u, especially with changes for the modular JDK in later versions, so automated backports via SKARA won’t work. If the patch was developed after the switch to the modular system (during the OpenJDK 9 lifecycle) and is not a HotSpot fix, shuffle the paths using `<jdk9u>/common/bin/unshuffle_patch.sh <repo> <8.patch> <8.patch>`. An updated version of this script is maintained in Andrew Hughes’ `jdk9u-updated branch on github`.
5. Try to apply the patch by using `git cherry-pick` as documented in the Skara backporting process. If it applies, go to #8. Otherwise, #7.
6. Fix the patch so it applies. This may require identifying other patches which need to backported first, in which case you start this process again with that fix.
7. Build the resulting JDK and/or run any new or modified tests, altering if necessary. Again, this may end up needing dependent backports to fix issues that arise.
8. Create a pull request on GitHub as described in the Skara documentation. The pull request should use the title "backport <<" where << is the hash of the original commit. This ensures that the PR is correctly recognised by Skara as a backport and bugs updated appropriately.
9. Wait for testing to complete and a successful review from an OpenJDK 8u reviewer.
10. Go to the bug in JIRA and add the `jdk8u-fix-request` label. Write a comment preceded with "Fix Request [8u]". Explain the motivation for the fix, and either explain that it applies cleanly to 8u with patch shuffling, or refer to the GitHub review process. If you don't have bug database access, someone will need to do this on your behalf. In the case that the bug is inaccessible (the page displays "You can't view this issue"), please make the request by e-mail to jdk8u-dev@openjdk.java.net with the subject "RFA: <bug ID> <bug description>" and the same motivation in the body of the e-mail as would have been included in the request comment. It may also be worth replying to the original review thread, asking for the bug to be made public.
11. Wait for an 8u maintainer to add jdk8u-fix-yes to the bug.
12. The change can now be pushed to the jdk8u-dev repository using the Skara /integrate command. If you are not yet an OpenJDK 8u Committer, you may need to wait for someone who is to issue the /sponsor command.
13. Pat yourself on the back, having successfully got a patch into OpenJDK 8u.

Backport bugs will be automatically created on push. If a backport bug needs to be explicitly created - for example, for a Compatibility and Specification Review (CSR) - then please apply labels to that bug to avoid the need to work on two different bugs for the one issue. The fix version should be set to ‘openjdk8ux’ where x is the current version of 8u being developed. Please avoid using ‘openjdk8u’ as such bugs will not be resolved automatically. Maintainers should double-check this fix version is correct when approving.

Fix Approvals

In general, we follow the common rules for the jdk-updates project.

If the backport does not apply to the 8u tree via the automated shuffling described above, it should first be submitted for review.

Push approval for a fix is then requested by setting the jdk8u-fix-request label on the original JBS bug. The maintainer will either approve this by setting jdk8u-fix-yes or reject it by setting jdk8u-fix-no. Outstanding approvals can be monitored here. If, and only if, the fix is approved, it may be pushed to the appropriate jdk8u-dev repositories. Approved fixes show up in this JBS filter (login required).

During the later stages of a release cycle, the release enters rampdown. The master jdk8u repositories contain the latest version of that release, while the jdk8u-dev repositories are used to start work on the next release. If a change needs to be pushed to a release in rampdown, push approval can still be requested using the jdk8u-critical-request label. As the name of this tag suggests, this process is intended for fixes such as major regressions that must make the release. More minor bugs and new features should go in the next release being developed in jdk8u-dev. The maintainers may approve with jdk8u-critical-yes, defer to jdk8u-dev or reject altogether. Outstanding approvals for critical fixes can be monitored here. If, and only if, the fix gets approved with jdk8u-critical-yes, it may be pushed to the jdk8u repository. Approved critical fixes show up in this JBS filter (login required).

At the end of the month prior to the release month, the jdk8u repository is declared frozen, so embargoed security fixes can be added in private during the final few weeks. On release day, the final version will be pushed to the jdk8u repository and source bundles made available.

JBS Filters

Some filters will only work for users that are logged into JBS.

Backports Needing Review

Source code

The jdk8u-dev tree for ongoing development can be cloned using this command: hg clone http://hg.openjdk.java.net/jdk8u/monojdk8u-dev

The corresponding master tree jdk8u can be cloned using this command: hg clone http://hg.openjdk.java.net/jdk8u/monojdk8u

If you just want a read-only copy of the sources, you may also use git: git clone https://github.com/openjdk/jdk8u
