

HotSpot Tools

This page documents a few of the tools that are part of HotSpot.

- [IdealGraphVisualizer](#)- tool for examining IR of C2
- [LogCompilation tool](#)- parse LogCompilation output of the JVM
- hsdis - [disassembler](#) used by hotspot for debugging (no docs yet)
- MakeDeps - build utility for hotspot (no docs yet)

External tools (not shipped with HotSpot, but still for visualizing data structures of HotSpot):

- [Client Compiler Visualizer](#): Tool for examining the HIR, LIR, and linear scan register allocation of the Client Compiler (C1).
