

# Main

OpenJFX is an open source, next generation client application platform for desktop and embedded systems for use with the JDK. It is a collaborative effort by many individuals and companies with the goal of producing a modern, efficient, and fully featured toolkit for developing rich client applications. This is the open source project where we develop JavaFX.

OpenJFX is free software, licensed under the [GNU General Public License with Classpath Exception](#), just like the JDK Project. Anybody is welcome to contribute to this project, port it to other platforms or devices, or do anything else that a free software license allows you to do! We welcome patches and involvement from individual contributors or companies. See the [CONTRIBUTING](#) document in our GitHub project for details on how to contribute. The [Community](#) section of this Wiki has some supplementary information.

The OpenJFX Project is part of the OpenJDK open-source Community. The [OpenJDK Bylaws](#) and [License](#) govern our work. The OpenJFX project membership can be found on the [OpenJDK Census](#).
