

HotSpot JBS components

Deprecated

This page is deprecated and its content is either old or being moved to the [OpenJDK Developers' Guide](#). Please update your links.

The HotSpot team owns two components in JBS: hotspot and core-svc.

Please note that all issues in the hotspot component are required to have a subcomponent set.

| Team | JBS component | JBS query |
|-------------------------------|---|---|
| Compiler | hotspot / compiler | <code>component = hotspot AND Subcomponent = compiler</code> |
| GC | hotspot / gc | <code>component = hotspot AND Subcomponent = gc</code> |
| Runtime | hotspot / runtime hotspot / jfr | <code>component = hotspot AND Subcomponent in (runtime, jfr)</code> |
| Serviceability | hotspot / jvmti hotspot / svc core-svc core-svc / debugger core-svc / tools core-svc / java.lang. instrument tools / hprof | <code>((component = hotspot AND Subcomponent in (jvmti, svc)) OR (component = core-svc AND (Subcomponent is EMPTY OR Subcomponent in (debugger, tools, java. lang.instrument)))) OR (component = tools AND Subcomponent = hprof))</code> |
| Monitor and Management | hotspot / svc-agent core-svc / java.lang. management core-svc / javax. management | <code>((component = hotspot AND Subcomponent = svc-agent) OR (component = core-svc AND (Subcomponent in (java.lang.management, javax.management))</code> |
| Test | hotspot / test | <code>component = hotspot AND Subcomponent = test</code> |
