

JDK 9 and the s390x port

JDK 9 includes the linux s390x port.

We ported most new features of OpenJdk to s390.

The JDK 9 port supports the following parts of the OpenJDK:

	linux big endian	linux little endian	aix big endian
template interpreter	yes	yes	yes
C1 compiler	yes	yes	yes
C2 compiler	yes	yes	yes
aot / graal	no	no	no

We build and run the VM on SLES 11.3 with gcc 4.8, but support it on other Linux distributions, too.

Processor: We support processors starting with z10.

Status

With the end of the main line support of jdk10 and jdk9 we also stopped supporting the port in jdk 9 and 10. For further development of jdk 11 and later see the main page of the port.

In [March 2018](#) JDK 10 was released on linuxs390x.

In [September 2017](#) JDK 9 was released on linuxs390x.
