

Main

Welcome to OpenJDK 8 Updates!

OpenJDK 8 updates are a [separate project](#) of OpenJDK. [Andrew Haley](#) serves as the Project Lead. The list of Reviewers, Committers, and Authors can be found in the [jdk8u entry](#) of the OpenJDK Census.

Maintainers

Repository Status

[jdk8u-dev](#) (git): Pushes for OpenJDK 8u342 after [jdk8u-fix-yes](#) approval. Check [here](#) for clearance.

[jdk8u](#) (git): Promotions of 8u342.

Timelines

Dates may be subject to change

OpenJDK 8u342

- Wednesday, March 9th 2021: jdk8u-dev forest [open](#) (tag: jdk8u342-b00)
- Friday, April 29th 2022: First build promotion jdk8u-devjdk8u (tag: jdk8u342-b01)
- Friday, May 6th 2022: Skipped, as no changes made.
- Friday, May 13th 2022: Second build promotion jdk8u-dev jdk8u (tag: jdk8u342-b02)
- Friday, May 20th 2022: Third build promotion jdk8u-dev jdk8u (tag: jdk8u342-b03)
- Friday, May 27th 2022: Fourth build promotion jdk8u-dev jdk8u (tag: jdk8u342-b04) & start of Rampdown phase
- Friday, June 3rd 2022: First jdk8u build promotion (tag: jdk8u342-b05)
- Friday, June 10th 2022: Second jdk8u build promotion (tag: jdk8u342-b06)
- Friday, June 17th 2022: Skipped, as no changes made
- Friday, June 24th 2022: Final jdk8u build promotion (tag: jdk8u342-b07)
- Tuesday, July 19th 2022: GA; OpenJDK 8u342 released (tag: jdk8u342-ga, likely to be jdk8u342-b08)

OpenJDK 8u352

- Monday, May 30th 2021: jdk8u-dev forest [open](#) (tag: jdk8u352-b00)
- Friday, July 29th 2022: First build promotion jdk8u-devjdk8u (tag: jdk8u352-b01)
- Friday, August 5th 2022: Second build promotion jdk8u-dev jdk8u (tag: jdk8u352-b02)
- Friday, August 12th 2022: Third build promotion jdk8u-dev jdk8u (tag: jdk8u352-b03)
- Friday, August 19th 2022: Fourth build promotion jdk8u-dev jdk8u (tag: jdk8u352-b04)
- Friday, August 26th 2022: Fifth build promotion jdk8u-dev jdk8u (tag: jdk8u352-b05) & start of Rampdown phase
- Friday, September 2nd 2022: First jdk8u build promotion (tag: jdk8u352-b06)
- Friday, September 9th 2022: Second jdk8u build promotion (tag: jdk8u352-b07)
- Friday, September 16th 2022: Third jdk8u build promotion (tag: jdk8u352-b08)
- Friday, September 23rd 2022: Final jdk8u build promotion (tag: jdk8u352-b09)
- Tuesday, October 18th 2022: GA; OpenJDK 8u352 released (tag: jdk8u352-ga, likely to be jdk8u352-b10)

Older releases can be found in the [archive](#).

The [transition of the 8u repositories from Mercurial to git](#) was completed after the April 2022 release, on Monday, April 25th.

General Information

As a preamble, the project lead has established general [guidelines for working on jdk8u](#) and [best practices for OpenJDK 8u backports](#).

OpenJDK 8 updates will be delivered on the same established [quarterly cycle](#) used by Oracle i.e. "the Tuesday closest to the 17th day of January, April, July and October."

Announcements and discussion take place on the [jdk8u-dev mailing list](#). Development takes place in the [jdk8u-dev](#) git repository and should be the primary place for OpenJDK 8u committers to submit their work.

Code from the development repository is regularly tagged and promoted to the main [jdk8u](#) repository, which is used to stabilize and deliver the quarterly releases. Distributors should use this as their primary source for creating OpenJDK builds.

For further process details, you may want to continue reading [here](#).

Contributing

New fixes should first be submitted to the development repository for the current version of OpenJDK, [jdk/jdk](#), first. The vast majority of changes submitted to the OpenJDK 8 project will be *backports* from later OpenJDK versions. The version of OpenJDK closest to 8u should be used to minimise the differences between the two JDKs e.g. if 11u is still maintained and has the patch, it should be backported from that repository, rather than [jdk/jdk](#). Occasional exceptions are made when an issue only applies to 8. In particular, the build system can be quite different from that in later versions, especially as regards HotSpot.

Everybody is encouraged to submit fixes for OpenJDK 8 updates by using the [SKARA](#) processes now common to all OpenJDK projects. Established community members will help new developers without commit access in getting their patch reviewed. Should you not be willing or not be able to drive a fix into OpenJDK 8 updates, you can still suggest changes. But by only doing that, you are at the grace of the community to pick up your suggestion.

The suggested process is as follows:

1. Check the bug database for which JDK versions already have the patch applied.
2. When actively starting working on the bug, add a label of the form 'jdk8u-<username>', to the bug - where <username> is your OpenJDK username - to indicate that you are creating a backport.
3. Take a copy of the patch from the repository of the JDK version closest to 8u to minimise changes.
4. 8u is now a single repository, so there should be a 1:1 relationship between patches to later JDKs and 8u patches, rather than multiple patches for individual sub-repositories. However, file locations are highly likely to be different on 8u, especially with changes for the modular JDK in later versions, so automated [backports via SKARA](#) won't work. If the patch was developed after the switch to the modular system (during the OpenJDK 9 lifecycle) and is not a HotSpot fix, shuffle the paths using `<jdk9>/common/bin/unshuffle_patch.sh <repo> <9.patch> <8.patch>`. An updated version of this script is maintained in Andrew Hughes' [jdk9u-updated branch on github](#).
5. Try to apply the patch by using `git cherry-pick` as documented in the [SKARA backporting process](#). If it applies, go to #8. Otherwise, #7.
6. Fix the patch so it applies. This may require identifying other patches which need to be backported first, in which case you start this process again with that fix.
7. Build the resulting JDK and/or run any new or modified tests, altering if necessary. Again, this may end up needing dependent backports to fix issues that arise.
8. Create a pull request on GitHub as described in the [SKARA documentation](#).
9. Wait for testing to complete and a successful review from an [OpenJDK 8u reviewer](#).
10. Go to the bug in JIRA and add the 'jdk8u-fix-request' label. Write a comment preceded with "Fix Request [8u]". Explain the motivation for the fix, and either explain that it applies cleanly to 8u with patch shuffling, or refer to the GitHub review process. If you don't have bug database access, someone will need to do this on your behalf. In the case that the bug is inaccessible (the page displays "You can't view this issue"), please make the request by e-mail to jdk8u-dev@openjdk.java.net with the subject "RFA: <bug ID> <bug description>" and the same motivation in the body of the e-mail as would have been included in the request comment. It may also be worth replying to the original review thread, asking for the bug to be made public.
11. Wait for an 8u maintainer to add jdk8u-fix-yes to the bug.
12. The change can now be pushed to the [jdk8u-dev repository](#) using the `SKARA /integrate` command.
13. Pat yourself on the back, having successfully got a patch into OpenJDK 8u.

Backport bugs will be automatically created on push. If a backport bug needs to be explicitly created - for example, for a Compatibility and Specification Review (CSR) - then please apply labels to that bug to avoid the need to work on two different bugs for the one issue. The fix version should be set to 'openjdk8ux' where x is the current version of 8u being developed. Please avoid using 'openjdk8u' as such bugs will not be resolved automatically. Maintainers should double-check this fix version is correct when approving.

Fix Approvals

In general, we follow the [common rules for the jdk-updates project](#).

If the backport does not apply to the 8u tree via the automated shuffling described above, it should first be submitted for review.

Push approval for a fix is then requested by setting the [jdk8u-fix-request](#) label on the original [JBS](#) bug. The maintainer will either approve this by setting [jdk8u-fix-yes](#) or reject it by setting [jdk8u-fix-no](#). Outstanding approvals can be monitored [here](#). If, and only if, the fix is approved, it may be pushed to the appropriate [jdk8u-dev](#) repositories. Approved fixes show up in this [JBS filter](#) (login required).

During the later stages of a release cycle, the release enters *rampdown*. The master jdk8u repositories contain the latest version of that release, while the jdk8u-dev repositories are used to start work on the next release. If a change needs to be pushed to a release in rampdown, push approval can still be requested using the [jdk8u-critical-request](#) label. As the name of this tag suggests, this process is intended for fixes such as major regressions that must make the release. More minor bugs and new features should go in the next release being developed in jdk8u-dev. The maintainers may approve with [jdk8u-critical-yes](#), defer to [jdk8u-dev](#) or reject altogether. Outstanding approvals for critical fixes can be monitored [here](#). If, and only if, the fix gets approved with [jdk8u-critical-yes](#), it may be pushed to the [jdk8u](#) repository. Approved critical fixes show up in this [JBS filter](#) (login required).

At the end of the month prior to the release month, the jdk8u repository is declared frozen, so embargoed security fixes can be added in private during the final few weeks. On release day, the final version will be pushed to the jdk8u repository and source bundles made available.

JBS Filters

Some filters will only work for users that are logged into JBS.

Source code

The jdk8u-dev tree for ongoing development can be cloned using this command: `hg clone http://hg.openjdk.java.net/jdk8u/monojdk8u-dev`

The corresponding master tree jdk8u can be cloned using this command: `hg clone http://hg.openjdk.java.net/jdk8u/monojdk8u`

If you just want a read-only copy of the sources, you may also use git: `git clone https://github.com/openjdk/jdk8u`
